Message from the Shire President

The Shire of Perenjori's Strategic Community Plan is an essential tool which aligns Council's programs with the aspirations of the community. This document was developed through contributions from the community and on behalf of the Council, I thank the Perenjori community for providing a strong and compelling message.

The community identified an ambition for a population target of 1,000 people residing within the Shire within 10 years (2027). This growth plan is identified in the document by detailing a number of key investments which Council believes will enable us to reach this target.

These investments include a strategy to enable local businesses and community to harness the economic development potential from the mining industry.

Environmentally, the Strategic Plan recognises the future growth driver that renewable energy will play and will therefore become a key driver for growth in the medium to long term for the Shire of Perenjori.

The Shire's outstanding environmental assets provide opportunities to become a centre of conservation, research, and nature-based recreation and tourism.

The Strategic Plan also recognises our core industry of Agriculture and its ongoing contribution to the local community and industry.

Societal and climatic impacts over the past two years have focused Council's resources on reactive processes. Federal funding through the Local Roads and Community Infrastructure Project has been received, although delivering of projects are impacted by the COVID-19 related restrictions including a shortage of personnel and infrastructure resources which also affect local industry and development.

Recovery from Tropical Cyclone Seroja will be a long-term project and focus, with priority given to the community's well-being and resilience. Council are committed to leading the shire towards an exciting future, building on the strong community spirit and endeavour which has developed this Strategic Community Plan.

To ensure that the Strategic Community Plan remains a living document, community consultation will recommence in 2022 with a plan to commence implementation in 2023. I encourage all community members to continue their involvement with the planning process to enable Council to deliver a relevant and viable program.

Cr Chris King

SHIRE PRESIDENT

VISION FOR THE COMMUNITY

Perenjori will be dynamic and innovative and build on its key industries – mining, agriculture, energy and the environment to deliver sustained growth for its communities. The community and Council will build on its resilient, adaptive and strong community spirit to create a place that people want to live, work and invest in. In every regard, Perenjori will EMBRACE OPPORTUNITY.

Mission for the Shire

The Shire of Perenjori will lead and partner the community to achieve its aspirational targets for the future. The Shire will work collaboratively with the community and partners and provide open deliberative decision making that empowers the community to participate. The Shire is the community's servant as well as its leader.

Values

Entrepreneurial and Resourceful

The key value that describes Perenjori is encapsulated in this question 'how can we help?' Perenjori is entrepreneurial and resourceful and they like to add value and solve problems for people. They are keenly interested in making things happen without necessarily counting the benefit or how it's distributed. They have an appetite for risk and they say yes to opportunities and then make them happen.

Resilient and adaptive

Perenjori has been a community that has faced very tough times. As a community it has a key value of learning how to respond to challenges and bouncing back from the most difficult of circumstances. It believes strongly in adapting and changing to get the best result.

Spirit and Independence

Perenjori is a community that values its independence and has a strong sense of identity. Its culture of resourcefulness and valuing hard work undoubtedly has its roots in its pioneering history and derives from the isolation and challenge to survive in a farming area that is on the edge of the pastoral zone. It also has generated the spirit of generosity and giving that creates the high levels of community spirit and volunteering.

Strength through Partnerships and Diversity

Whilst valuing its independence, Perenjori is a community that also values interdependence. It actively works to partner with other Shires, Regional organisations, business and industry and all parts of Government to achieve mutual goals. The Shire recognises that it alone cannot achieve the outcomes needed for the future prosperity of the community. Working together in a united fashion creates more strength for the future.

Ethical and upfront

The Shires commitment is to honesty, integrity and accountability. It believes it should be held to account for its performance and results that it generates. It also believes that the way in which it undertakes its leadership role is important and is committed to being accountable for its commitments and honest in all its dealings. Trust is a key ingredient in relationships and Perenjori believes people will want to do business with them if they hold true to their values.

Financial Sustainability

The Shire has a core value that it must have the capacity to manage its finances in the long-term to enable the community's expectations to be met and growth to be delivered on. It will manage its resources to create the greatest net gain and invest strategically in projects and programs that bring the greatest long term good.

Plan for Growth

The Shire of Perenjori has an area of 8,611km² and is located 348km north of Perth and 39km south of Morawa, Western Australia (see Figure 1).

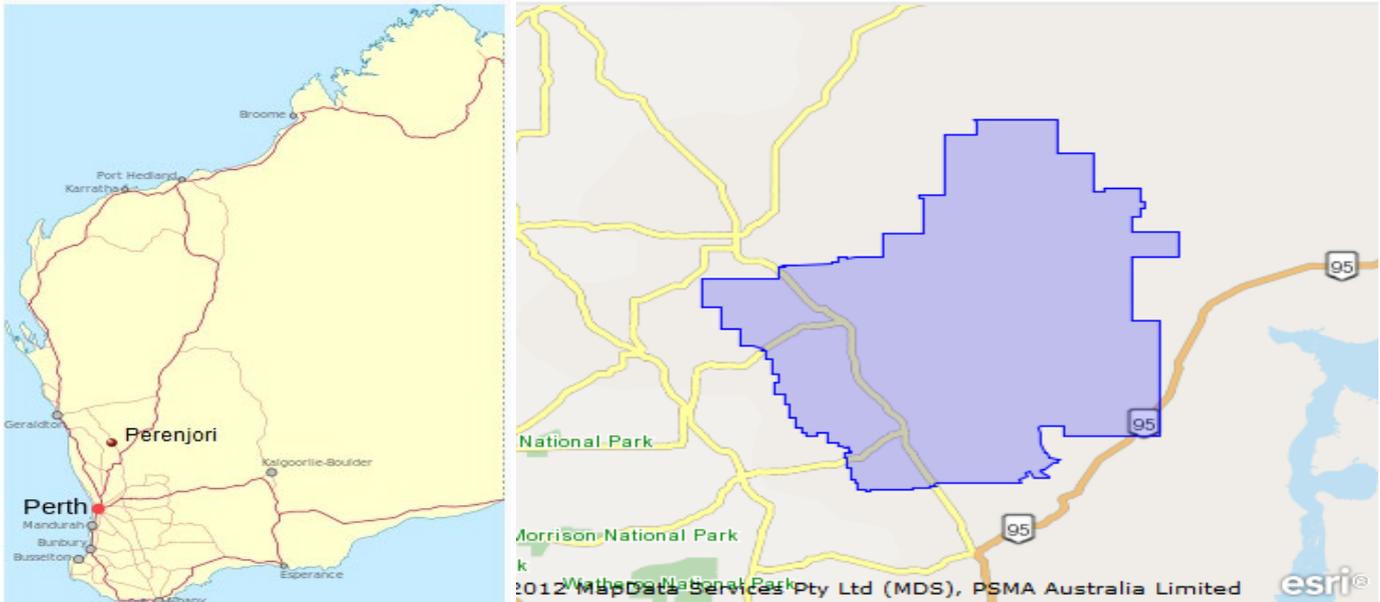

Figure 1: Location of Perenjori town and shire, Western Australia

The Shire of Perenjori has experienced a decline in population numbers over the last five years, which has reversed the trend of earlier years. Most of the decline is a result of the downturn in the global environment and local industry changes. Whilst the Mining Industry has created multiple and varied opportunities for the local business and service sectors in the past these opportunities are no longer being experienced in Perenjori. Population growth will be a real challenge for the community with the need for strategies to support the attraction and retention of families. A proactive and innovative strategy for enticing population to reside in Perenjori and to contribute to the local community and place is required.

Population Target

The community has set a population target of 1,000 people living in the Shire. This does not include the population at the Karara mine site. This will require a significant investment in key infrastructure and services that will provide the capacity to capture growth.

Key Growth Drivers

There are four key growth drivers that are impacting the Shire of Perenjori, two of which are current key drivers and two of which are more future oriented drivers:

- Banded iron formation – Perenjori is the geographic centre of the southern group of projects of the emerging Midwest Iron Ore Province (**current driver**)
- Environment – unique terrestrial, biodiversity and land features which is highly sensitive and of high value to conservationists, researchers and visitors (**medium term future driver**)
- Agriculture – impacts from a changing climate have created a highly adaptive farming system that has enabled the farming population to survive extremely low rainfall growing seasons (**current driver**)
- Renewable Energy – this region is noted as having the best solar generating capacity in the world and the potential to develop thermal solar power in the Shire has been noted (**medium term future driver**)

In the next 10 years, population growth will come from the continued supply of goods and services to the mining industry in the production stages. The key investments in the Strategic Plan are designed to enable the community of Perenjori to invest in key infrastructure which will enable the community to capture the maximum degree of strategic growth from this driver. A development of accessible industrial lots is planned with LandCorp to ensure any future needs can be met.

The other key asset the community has is the surrounding environment, landscape and ecology. It encompasses the transition between the agricultural zone and the pastoral zone. It is at the intersection of three biodiversity regions and has features of all three, and has spectacular lake systems and unique geology. Due to the presence of Conservation NGO's and unallocated crown land managed by DEC, a large (450,000 ha) conservation estate is forming that has sufficient size to establish conservation values that are significant and able to be interpreted. The capacity for conservation, research and nature based recreation and tourism is vast. This is a medium term driver for growth and will be a key attraction in creating population growth. The Environment Centre project in the Strategic Plan is a key investment to capture strategic growth from this driver.

The Shire has been founded off the back of Agriculture. It is still a major employer within the Shire and will continue to be a strong economic contributor and strategic employer. The capacity for growth in agriculture is based entirely upon innovation and creative responses to key pressures. Perenjori is considered to be "ground zero" for climate change. The key trends in climate change for this area are loss of autumn starting rains for seeding, lower winter rainfall, potential loss of spring rains, late summer rains and possible summer rain events that also bring destructive rain and wind events. The adaptive response of the farming community in Perenjori has been broad. Some have provided assets, skills, equipment and labour to the mines as a form of business innovation, some have trialled new business enterprises some have diversified and others have created very efficient farming systems approaches which enable them to profit in low production years and save capital in good to high production years. Statistically it also known that off farm income has become more important to farming families due to dry growing seasons.

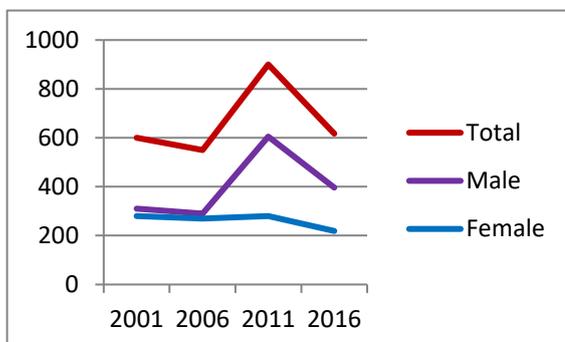

The attrition rate for farming in the Northern Agricultural Region is 2-3%. Perenjori is likely to be similar, although it is more likely to happen after good seasons or when land is attractive for sale. Current initiatives in the region such as the push to carbon farm can provide future alternative income for other land uses. The ability to innovate and create new responses to key pressures will be essential, and the Shire is planning to invest in the Perenjori Farming Futures group to assist achieve this.

The region is known for having the best solar generating capacity in the world. Renewable energy will therefore become a key driver for growth in the medium to long term for the Shire of Perenjori. The Shire will continue to be a strong advocate to attract investment to drive the Perenjori Solar Park project in the future.

Key Statistical Trends

The population recorded as living in Perenjori on census night 2016 is 617 people. This is a 31% decrease on the previous census and is a rapid reversal from the population increase experienced between 2006 and 2011 censuses.

Figure 2: Population of Perenjori (2001 – 2016), Source: ABS Census 2001 - 2016

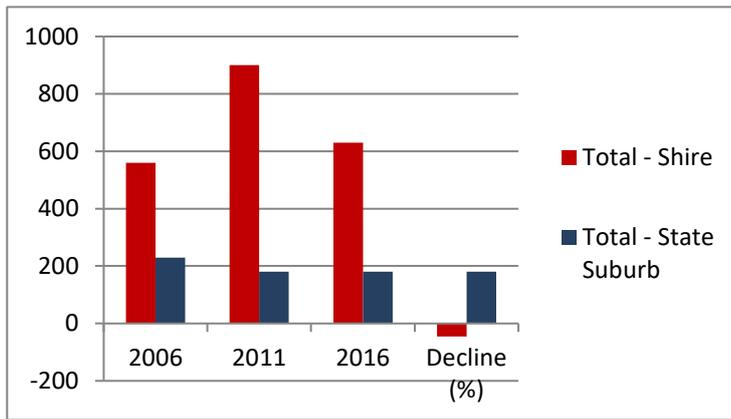

Figure 3: Population number and growth of the Shire of Perenjori and State suburb, Source: ABS Census 2001 – 2016

The other noteworthy demographic change that is occurring in Perenjori is the proportion of the population born in Australia, which has declined from 93% in 2006 to 74% in 2011. The other major countries of birth include New Zealand (6%), England (4%), Scotland (2%) and Ireland (2%).

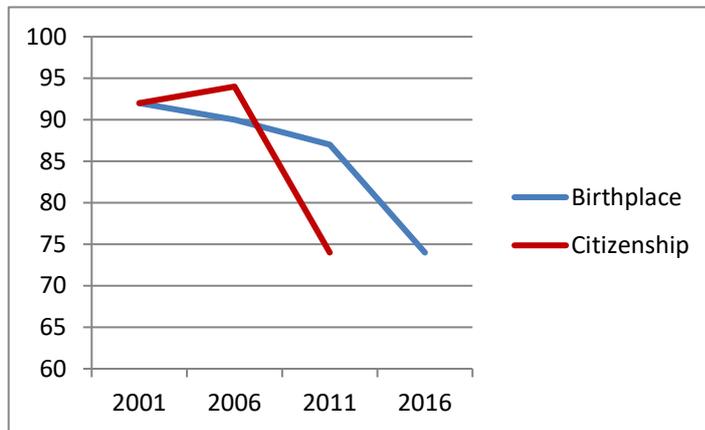

Figure 4: Population of Perenjori with Australian birthplace and citizenship (%), Source: ABS Census 2001 – 2016

The median total personal income is currently approximately \$1,700/week. This has increased significantly from approximately \$400/week in 2001. The median total family income has also increased steadily to \$1,500/week in 2011 from approximately \$800/week in 2001.

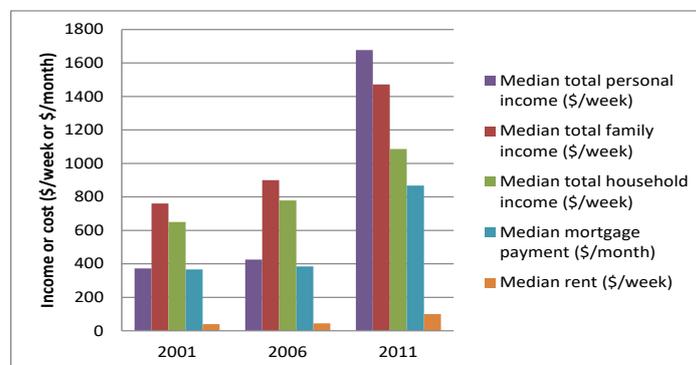

Figure 5: Income, mortgage and rent indicators, Source: ABS Census 2001 – 2016

The total labour force of the Perenjori population (15 years and over) decreased by 19% between 2001 and 2006, but increased again by a similar amount in 2009 (Figure 15 – note there is a 5 year gap between 2001 and 2006 which is Census data but only a 3 year gap to 2009 which is PHIDU data). In 2001 and 2006, the structure of the labour force remained largely unchanged with 65 - 67% in full-time employment, 26 -28% in part-time employment, and 4% unemployed (3% of the population did not state their employment status). Unemployment decreased to 2% in 2009. The number of people (15 years and over) who are not in the labour forced remained unchanged at 98 people in both 2001 and 2006, but decreased to 75 people in 2009. The marked change in employment status from 2006 to 2009 is likely to be due to flow-on effects of local mining initiatives (see Table 1). This has continued into 2011 with unemployment dropping to 1% largely due to the impact of the Mining industry.

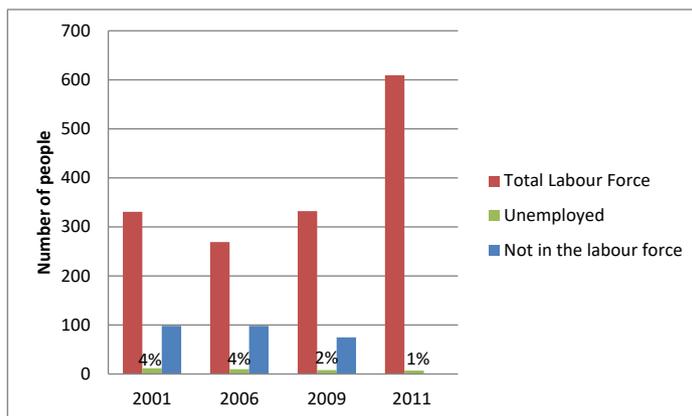

Figure 6: Labour force - population 15 years and over (including % of labour force), Source: ABS Census 2001 – 2006 (2011 data available in October 2012), 2009 from PHIDU (2011)

Approximately 32% of Perenjori’s population 15 years and older are providing unpaid childcare to their children. This is significantly higher than WA and non-metropolitan WA statistics.

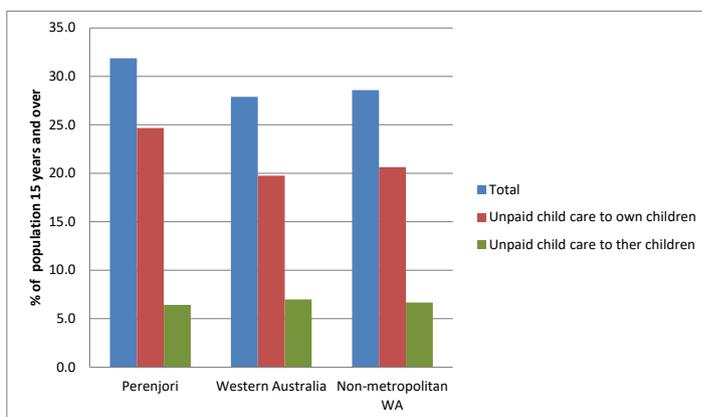

Figure 7: Percentage of people 15 years and over providing unpaid child care, 2006, Source: PHIDU (2011)

The most common occupations for employed persons in Perenjori are Managers and Administrators (Figure 17), although this has dropped in 2011 as a relative percentage because of large increases in tradespeople, transport and machinery operators and other increases in professionals, sales/service personnel and labourers. This employment impact reflects the current construction stage of the regional Mining industry.

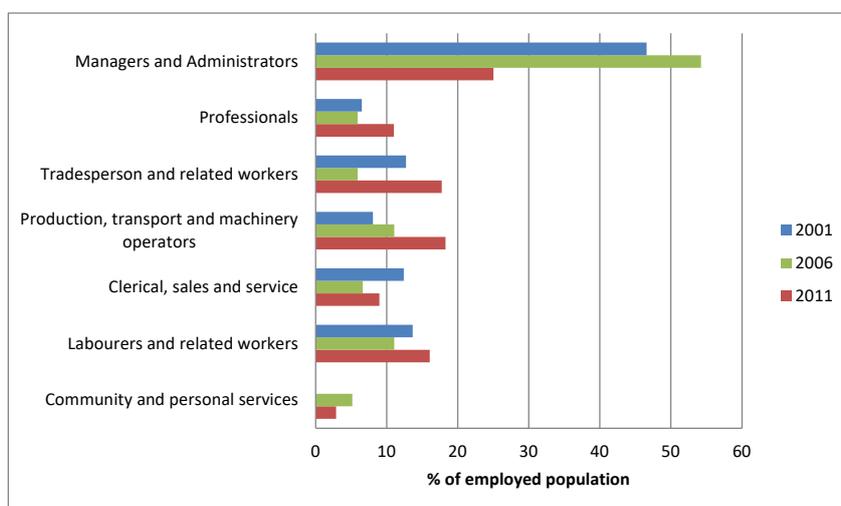

Figure 8: Employment by occupation, Source: ABS Census 2001 – 2006

The most common industry of employment in Perenjori has always been Agriculture. The percentage of employed people working in this sector increased in 2001 to 2006 from 57 to 60%, but has dropped as a relative percentage because of the increase in Construction and Mining. Employment significantly increased in Construction, Mining, and Accommodation and food services. This demonstrates positive flow on to food and accommodation businesses in the community. Other positive trends are increases in the relative employment in Professional, scientific and technical services, Transport, Rental/Real Estate services, other Services and Manufacturing, which demonstrates diversity in employment.

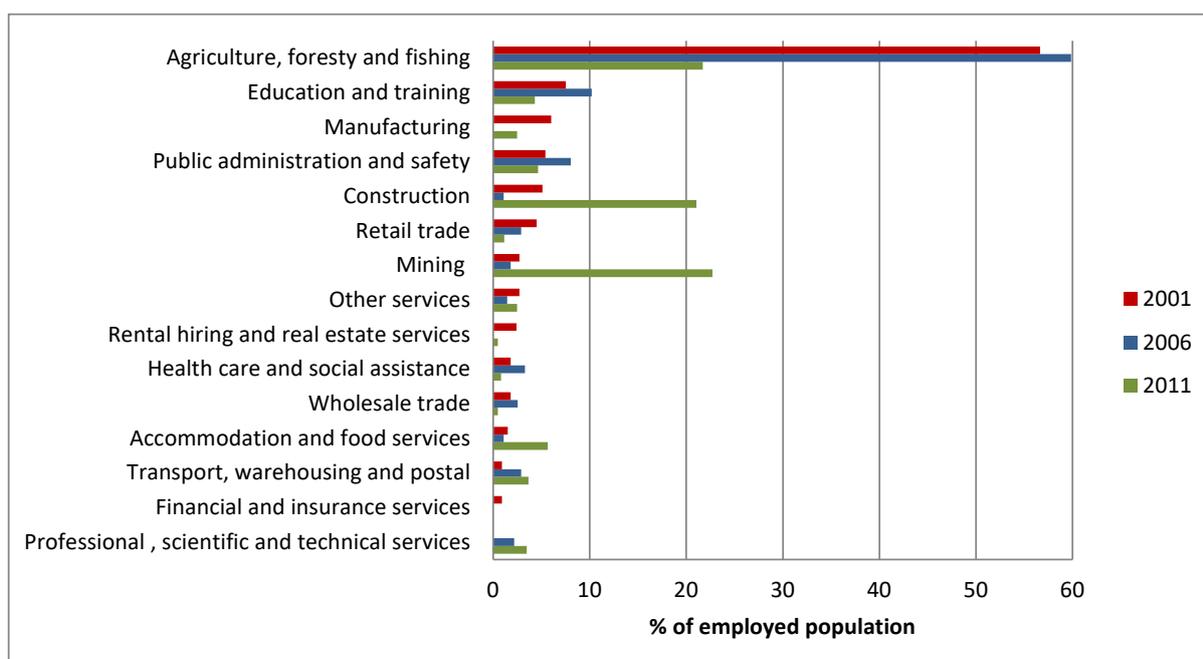

Figure 9: Industry of employment for 2001 and 2006, Source: ABS Census 2001 – 2006

Community strength may be measured by the proportion of the population involved in volunteer work of some kind. It can be seen that Perenjori’s community is significantly stronger compared with WA and Australia as a whole.

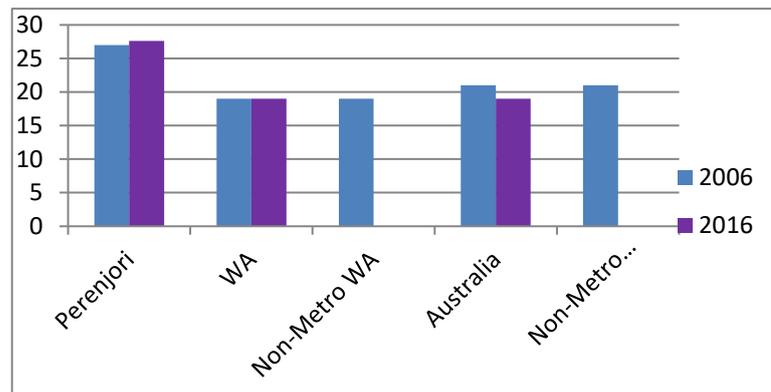

Figure 10: Percentage of people 15 years and over whom participated in voluntary work, 2006, Source: PHIDU (2011)

Summary

Overall the statistical trends for Perenjori show significant decline in population numbers. There is evidence of the impacts of the downturn in the National and State economies also impacting regionally. Loss of population can be due to downturn in the mining industry, increasing use of technology in agriculture and changes to the education of year 7 students and limited secondary options available locally. These impacts along with ongoing housing affordability have flowed on to other factors.

Perenjori has a much higher community strength indicator than WA and Australian averages. There are also a smaller proportion of vulnerable people within the Perenjori community compared with WA. This demonstrates the capacity of the community to capture on going benefits of nearby developments and the resilience of the people.

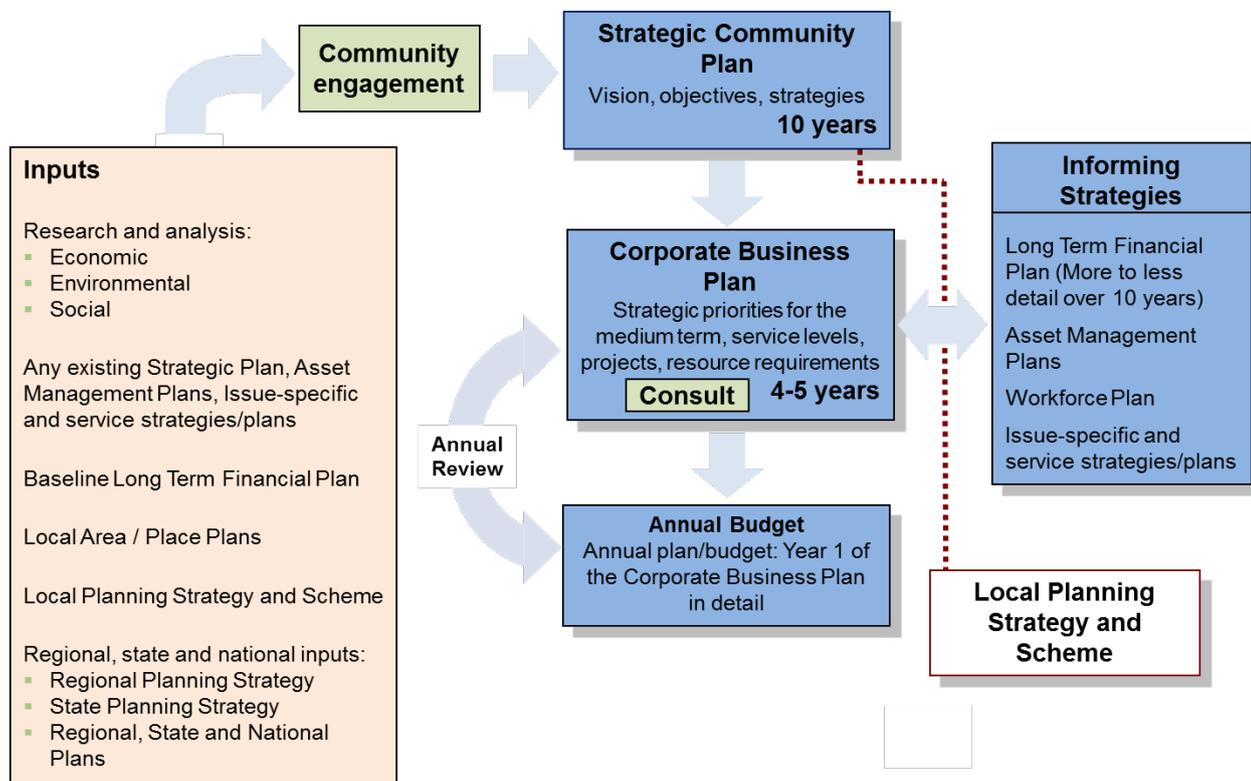

Integrated Strategic Planning

The Integrated Strategic Planning Framework provides the basis for improving strategic planning in local government. It provides a clear process where-by:

- Community input is explicitly and reliably generated
- It informs the long term objectives of local government with these inputs
- The resourcing is identified to deliver against the long term objectives
- Long term financial implications and strategies are articulated

The framework has been developed according to the Integrated Planning and Reporting Framework and Guidelines which were released in October 2010. Section 5.56(1) of the Local Government Act 1995 requires that each local government is 'to plan for the future of the district', by developing plans in accordance with the regulations.

Diagram 1: Integrated Strategic Planning Framework

The framework has the following elements:

- 10 year Strategic Community Plan which outlines our vision for the future, our values and our strategic goals. That is this document. **It will have a major review every 4 years and a minor review every 2 years.**
- 4 year Corporate Business Plan which details what the Shire will do to implement the Strategic Community Plan. This document details the key projects and resources required to deliver on the Strategic Community Plan and details the planned project outputs/outcomes, estimated project costs, source of funds, project schedule and resource required to implement projects. The Corporate Business Plan also contains a risk assessment of the Shires financial and human resource capacity to implement the Plan over the 4 years. **The Corporate Business Plan will be reviewed each year.**
- An Asset Management Plan which enables the Shire to plan and manage the assets so that the community's aspirations can be reached. It is based upon 'whole of life' and 'whole of organisation' approaches and the effective identification and management of risks associated with the use of assets.
- 10 year Long-term Financial Plan which is a high level document that indicates the Shire's long term financial sustainability, allows for early identification of financial issues and their longer term impacts, and shows the financial impacts of plans and strategies.
- A Workforce Development Plan which will analyse the operational capacity of the Shire, contrast that to the strategic needs created by the plans, and identify the capacity, skills and knowledge gaps and how to address them.
- An Annual Financial Budget which will record the planned activities and expenditure for each year; and
- An Annual Report which provides the community with a detailed account of what has been achieved each year and progress made towards the Performance Targets and achievement of Corporate Business Plan.

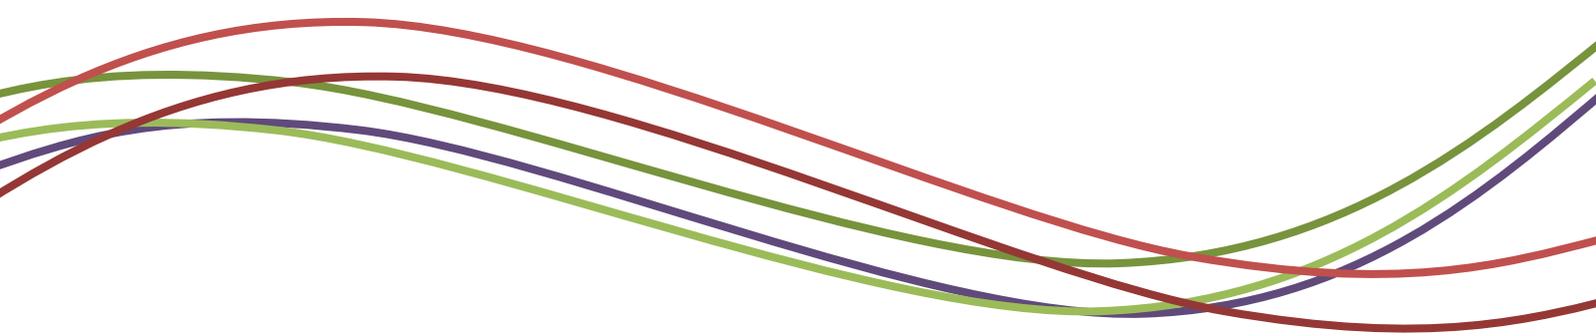

How do they all work?

The Strategic Community Plan will be operationalised through the Corporate Business Plan. It will reflect the local government's capacity and intention to deliver services and provide and maintain assets for their community. The internal business planning of the Council will be demonstrated in the Corporate Business Plan.

The Workforce Plan allocates staff resources to the key activities nominated under the Corporate Business Plan.

This links to the Long Term Financial Plan of Council which is a ten year rolling plan that indicates the local government's long term financial sustainability, and allows early identification of financial issues.

The Asset Management Plan ensures that local government assets are in optimal condition to maintain service levels. This will enable cost efficient servicing of community needs within financial constraints.

Development of the Plan

The process to develop the plan flowed through a number of key stages over a six month process. Data and information was gathered which was then tested against community opinion and ground-truthed. This has enabled both a breadth and depth process with the local and regional community being involved in generating ideas for maximising opportunities and overcoming key challenges for Perenjori.

The community was highly engaged in the development of the plan through a number of different processes. They included:

- Public workshops (20 attendees)
- Focus groups (Council - 6, General – 5, parents & seniors – 14, youth – 2, attendees)
- Survey (29)
- Post-it wall at CRC (6 contributions)

In total 82 people were involved in the development of the plan. This represents 11% of the community of estimated 750 people.

Diagram 2 outlines the progression of the planning process and the link between elements.

Diagram 2: Planning Flowchart Perenjori Community Strategic Plan

What did the Community Say?

The Community believes they are resilient, resourceful, family friendly and that community spirit is strong. The community wants to promote the family benefits and with people having the opportunity to have a connected lifestyle in a friendly and welcoming place. The community also see the need to continue growing economically to try and attract business to town. The community see keys strengths and weaknesses.

Strengths:

- Strong Cultural history & local knowledge
- Solid partnerships exist with environmental organisations e.g. NACC, Gunduwa, BHA etc.
- Climate for solar/renewable energy sources
- Strong community cohesion and volunteering
- Developed relations with mining
- Diverse industries including, agriculture, mining and tourism
- Safe community – low to no crime rate
- Mix of good age ranges, families, seniors and youth
- A place of choice for many who live here
- Warm, friendly and accepting community
- Abundance of unique, raw, natural beauty – wildlife, flora & fauna

Weaknesses:

- Not taking advantage of local knowledge and using it to its full potential
- Local accommodation options limited (tourism development)
- Lack of business knowledge for start up's and for ongoing management
- Lack of seasonal accommodation for Agricultural workers
- Local retail offering not comparable to surrounding towns
- Difficult to attract specialist staff
- Technology knowledge limited
- Lack of activities for children and young people
- Losing population, including young people due to limited schooling and social choices
- Limited employment opportunities for locals
- Unreliable power across Shire

The community outlined what they believe are key opportunities and investments to achieve growth and development across the Shire.

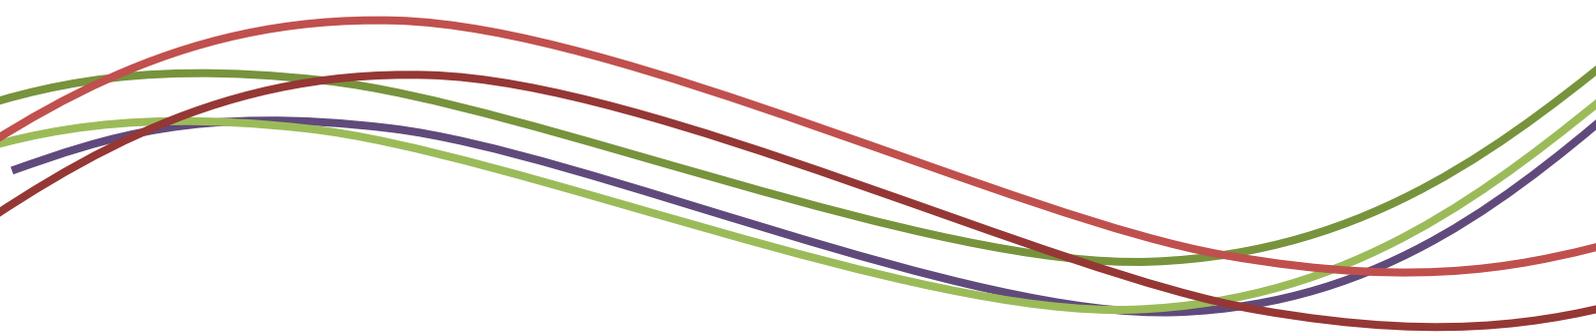

To drive the Economy, the following investments are needed:

- Accommodation and Housing – promoting private investment
- Land Development, industrial and residential
- Sewer reticulation (alternatives to tanks)
- Active business development program
- Transport linkages
- Power reliability
- Environment Centre, including Solar Discovery Centre
- Solar Power Project
- Mining - residential commitments
- Telecommunications continue upgrade
- Waste management – Regional and Recycling
- Land use projects such as carbon plantings

To drive Population growth, the following investments are needed:

- Continued retail revitalisation and CBD development
- Migration Strategy
- Cultural events and facilities
- Reliable power
- Support for volunteers
- Telecommunications
- Focus on health and well-being
- Quality education locally from early childhood to secondary
- Secure water supply for long term
- Preventative social services
- Aged care – low care options for housing and linking to regional services
- Ongoing support for resilience and maintain positive attitude

The strategy areas have been developed based upon the community's input, and there is a consequent good level of community ownership of the ideas that form the backbone of the Community Strategic Plan.

Key Strategy Areas

The Strategy areas have been developed to respond to the Community input and deliver on the population growth target for the community.

The population target will require a significant investment in key infrastructure and services.

5 Key Areas of Investment

Area 1: Infrastructure and Natural Assets - Our Natural and Built Environment

Goal: A community that develops and lives sustainably in a thriving natural and quality built environment, which meets and maintains current and future community needs.

This strategy area will enable the Shire of Perenjori to develop key infrastructure that will enable growth and development. It includes investment in key areas such as water supply, mobile phone coverage, NBN/digital connection, power supply, transport linkages and waste management. Investment in these areas will not only assist existing businesses and residents but help to attract new residents to the community. It will provide key infrastructure for growth.

This strategy area also covers a key opportunity area for Perenjori and that is to develop an environmental centre to link to the 450,000 ha of land being managed in the east of the Shire as an environmental asset.

Area 2: Industry and Business Development – Our Economy

Goal: Fostering and maximising growth across the economy, seeking and embracing opportunities for diversifying and strengthening our economic base.

This strategy area is designed to invest and support business growth and development for the Shire. It will ensure land development for future industrial and residential growth occurs in a timely manner. It will continue to strengthen the tourism industry opportunities and identify other industry areas which can assist in diversifying the economy. It creates key links with regional organisations to ensure access to business planning support services, new business opportunities to maximise business growth.

Area 3: People and place – Our Community

Goal: Demonstrating a high quality of life for all, offering relevant activities, facilities, and services to enable people to meet their needs and achieve or exceed their potential.

This strategy area is designed to invest in key areas that will ensure a high quality of life for the community and ensuring key services are in place to meet community needs. This includes housing to create community and private investment, key education developments and projects supporting a healthy community. It also includes a range of initiatives in the cultural, heritage and recreational fields, and ensures the safety and security of the community through key projects. Along with investment in the CBD of Perenjori to ensure the retail environment can be revitalised over time and overall population growth strategies be implemented to see an increase in families coming to the Shire.

Area 4: Investing in Community Capacity – Civic Leadership

Goal: Supporting community's strong volunteering culture and supporting community leaders to grow and develop.

This strategy area will create a marketing program for Perenjori which will attract investment, new residents and keep the community informed about projects the Shire is undertaking. It will foster continued investment in significant events including the Agricultural Show and Blues for the Bush and will support community volunteers and local leaders to be trained and encouraged to develop leadership potential.

Area 5: Investing in Councils Capacity – Our Leadership

Goal: Strengthen the Shire's position as an innovative and proactive local Government providing excellence in all areas of governance, management and leadership.

This strategy area will build the capacity of the Council to undertake ongoing planning, reviews and report on progress and develop leadership and management capacity within Council and staff. It will also ensure Council strategically targets fundraising strategies to achieve key projects.

Area 1: Infrastructure and Natural Assets - Our Natural and Built Environment

Goal: A community that develops and lives sustainably in a thriving natural and quality built environment, which meets current and future community needs.

Strategic Theme 1: Infrastructure and Natural Assets

	Objectives	Measurement	Timing	Projects	Partners	Priority	Resourcing 17/18 FTE's
Telecommunications	Continue to advocate for coverage across black spot areas	% shire covered by Mobile footprint	2019 2020	Telecommunications Project	RfR Black Spot Program, CLGF regional (14/15)	Med	CEO 0.01

Resource Capability

The Development Plan for the Shire is quite ambitious but does reflect that the Shire of Perenjori is the second fastest

growing Shire in WA between 2006 and 2011. The overall resources required to implement the Strategic Community Plan across the next four years are within the capacity of existing staff resources. This is outlined in greater detail in the Corporate Business Plan.

The FTE requirements for 17/18 year to implement this plan are:

- CEO 0.83
- Manager Corporate and Development Services 0.33
- Community Development Officer 0.56
- Manager Infrastructure Services 0.27
- Senior Finance 0.10
- Coordinator PECC 0.10
- Club Development Officer 0.20
- Team leader Town – 0.10
- Team Leader Roads – 0.60

These estimated FTE's are within current staffing allocations, indicating the plan will be able to be delivered within current capacities. **There are therefore no new workforce requirements created by this plan. The concern however is that the CEO has a number of other duties to fulfil which are not included here, including the support and supervision of 6 FTE and 1 contract position, administrative tasks and human resource matters.**

The Shires key strategy for managing times when demand for key staff exceeds supply is to use a local/regionally based network of contractors who know the Shire, have established relationships with the Council and Senior Staff and can get work completed quickly and on budget. The key issue with this model is the continued loss of corporate knowledge from the Shire, so the depth of the business systems are quite critical to ensure knowledge is captured within each project/contract and as much as possible retained within the Shire knowledge base.

In addition the opportunity to resource share exists to address specialist areas including:

- Asset Management
- Engineering
- Health and Building
- Planning
- Accounting

These additional resources will enable the Shire to extend the existing capacity of the current staff resources. It will also support possible mentoring of staff that can create peer mentoring and support. This model is currently being developed informally across the mid-west.

Key issues for the Shire are the key person dependencies created by the flat and small staff structure. This will create challenges for the Shire in managing succession planning for key roles. The mentoring approach suggested already will be the key management strategy to manage the lack of succession, and to support the building of a regional workforce.

These and other related challenges are addressed in the Corporate Business Plan.

What Council Provides

Council provides a range of infrastructure assets to enable services to be delivered to the community.

This plan covers the following assets:

- Roads comprising roadways (1,611km),
- culverts (368), railway crossings (23),
- road signs (1,231), floodways (61),
- footpaths (5km) and kerbing (10.6 km)

Buildings comprising

- recreation (5),
- Council/ depot (8), public/civic (10) and
- housing (27)

Other assets covering

- recreation (13),
- Tourism (8),
- Council (1),
- public/civic (3),
- airport (3) and
- waste (2)

What does it Cost?

There are two key indicators of cost to provide the services.

- The life cycle cost being the average cost over the life cycle of the asset, and
- The total maintenance and capital renewal expenditure required to deliver existing service levels in the next 10 years covered by Council's long term financial plan.

The life cycle cost to provide the infrastructure service is estimated at \$4,823,000 per annum. This includes \$1,567,000 per annum for roads where the maintenance is funded by mining companies. The lifecycle cost to be funded by Council is \$3,256,000. Excluding the roads where the maintenance is funded by mining companies, Council's planned life cycle expenditure for year 1 of the asset management plan is \$2,977,000 which gives a life cycle sustainability index of 0.91.

Excluding the roads where the maintenance is funded by mining company's total maintenance and capital renewal expenditure required to provide the infrastructure service in the next 10 years is estimated at \$27,269,000. This is an average of \$2,726,900 per annum.

Council's maintenance and capital renewal expenditure on the infrastructure service for year 1 of the asset management plan is \$3,305,000 giving a 10 year sustainability index of 1.21.

Financial Estimates of the Strategic Community Plan

The Financial Estimates in this plan assume the majority contribution for each project occurs through grants funding for capital works. The costing estimates have been used to update the Forward Capital Works Plan and will be used to generate the Long Term Financial Plan that is not yet produced for the Shire of Perenjori.

The total expenditure under this plan at the time of adoption was as outlined in the following table.

	2017/18 \$	2018/19 \$	2019/20 \$	2020/21 \$
Council Contribution				
Mid West Dev Comm				
Other				
TOTAL				

The key risk that this plan exemplifies is the high degree of dependence upon external revenue sources to develop the community's infrastructure. The Shires ability to achieve their desired outcomes will be influenced by other levels of Government. There are a number of objectives and projects which will rely on the support and assistance from both State and Commonwealth Governments. The Shire works constantly in collaboration with various partners, which can include corporate, Government, community and Non-Government organisations. Working with partners can provide leverage in acquiring access to funding, specialist skills and knowledge that can all have a significant impact on our ability to achieve our objectives.

Financial Ratios

The Long Term Financial Plan has yet to be reviewed and as such Financial Ratios are not available for the Shire at this stage.

The Shire of Perenjori has worked hard to manage the finances well, maximising use of funding opportunities and the generation of income. Working towards sustainability the plan has been developed with realistic objectives and time frames which have been assessed in more detail in relation to our available resources within the Corporate Business Plan.

Assets of Shire

Within each Strategic Theme there are a number of key objectives which have specific measurement criteria which are either output or outcome based. These will be used by the Shire to monitor the achievement of the plan and they are linked to the Corporate Business Plan. They will be used to monitor project activity, but not reported on in the Annual Report.

Key Performance measures have been set against the 5 strategy areas. These KPM's are designed to be reported against annually in the Shires Annual Plan. This will enable the community to track progress against the objectives and to also understand the impact of the plan's implementation.

Strategy Number	Strategic Area	Key Performance Measures
1	Infrastructure and Natural Assets	Community satisfaction telecommunication services (annual survey) Community satisfaction town amenity (annual survey) Community satisfaction power supply (annual survey) Community satisfaction other services eg. Roads, pathways (annual survey)
2	Industry and business development	Number houses built per year Waste targets achieved Number ha carbon farming plantings/yr
3	People and place	Number new businesses per year attracted Reliable Doctor service in Perenjori – at least one session per week Number cultural events held Annual community satisfaction with cultural, heritage and recreation services (annual survey)
4	Community capacity	Volunteering rate each census period Community satisfaction with engagement with Council (annual survey) Number new community leaders undergo training per year Health clubs – Club Development Officer
5	Councils capacity	Financial ratios meet standards Low employee turnover Successful fundraising for key projects

Acknowledgements

This plan has been developed with the active assistance of key staff within the Perenjori Shire. They include the CEO Ali Mills, the Community Development Officer, Christina Laue, Manager of Infrastructure services, Ken Markham and the Manager Corporate and Community Development Services, Peter Money. The Shire has continued to demonstrate its great support for their community and its strong desire to have a high level of engagement from community members.

Shire Councillors were also very involved in the process and thanks goes to all Councillors for their time and effort to make sure the plan is right for the community. Special thanks must go to Laurie Butler, the Shire President who has given extra time and great support to the planning process.

Finally the community members who entrusted their opinions and dreams for their future to the Facilitator of the process – thank you! You have made the plan a truly local and relevant plan that will address your needs well into the future, and it was a great joy to meet you all and share in your planning process.
